Shift in Crime Numbers by Type: From 2003 to 2022

The crime trend from 2003 to 2021 initially declined, notably between 2003 to 2009. From 2011 to 2019, there was an increase in the number of crimes, only to be followed by a reduction starting in 2019, which could be attributed to the COVID-19 pandemic, with a **24%** decrease in **2020** compared to the previous year. In **2022**, there was a slight increase in the crime rate (**5%**), suggesting a rebound in criminal activities. Most crime types have increased. However, there was a reduction in specific categories like **break and enter** and **homicide**.

**The Central Business District**, consistently records the highest number of crimes. Conversely, quieter neighborhoods like Musqueam and Stanley Park have some of the lowest crime rates.
